Hello,

The following submission has been created.

Track Name: EIconCIT2023

Paper ID: 26

Paper Title: Digital Village System Transformation to Increase the Potential of Sidemen Village Karangasem Bali

Abstract:
 Sidemen Village is one of the villages in Karangasem Regency. The most famous products from Sidemen Village are songket cloth and lontar comics. Seeing the potential that exists in Sidemen Village, it is necessary to develop a Digital Village in Sidemen Village, Karangasem. Digital villages will help improve communication between village officials and fellow village officials and with village residents. The research method uses the SDLC method which includes planning, analysis, design, implementation, and testing stages. At the planning stage, data is collected which will later be used in the analysis process. At the analysis stage, an analysis of functional requirements is carried out as a basis for the Digital Village website design process. At the design stage, the design of the Digital Village website is carried out in the form of database design to show what data is processed on the website. At the implementation stage, implementation is carried out in the form of website page implementation. At testing stage, data is collected through questionnaires and testing using the TAM method using the SPSS application. The system produces 10 features on the website in the form of: Admin Login, Village Resident Login, Village Information, Village Information Dashboard, Land Dashboard, Correspondence Dashboard, Assistance Dashboard, Financial Dashboard, Village Resident Dashboard. Based on the results of hypothesis testing from the proposed model, it is known that there is only 1 hypothesis that is accepted, namely the influence of PEOU on ATU, which means that the belief that the application can be easily understood and used has an influence on acceptance or rejection of the use of the application as a result when someone uses an application in a particular job or activity.

4. Proof of payment (21 Oktober 2023)

5. Revision from editor to be submitted to BUSINTA journal (4 November 2023)

Technology adoption model or development of the application, but my suggestion is since you are analyse of the digital transformation, I think is beter you focus for the technology adoption, so all of the paper focus for the technology adoption by the village for having a digital transformation based on the TAM framework, maybe you can eplore it by provide some new variable to your technology adoption framework and we can test of confirmatory research about your model, is that the village is already have a good knowledge or have a ready to achieve a digital transformation, so in my opinion, it's much better if you focus for technology adoption model, not develop the application since if you do the development of the application, you must compare with the other applications an how to user accept this application, but since you have the technology adoption as your measurement evaluation metrik so much better to focus this. I think that's better. Because a lot of research has been done especially on my journal had been edit as servant associate editor its international journal for the information system, many relate,so maybe you can search and adjust the paper, make comparison like journal information, so that will be nice, is about how the digital transformation is done n how the people look the digital transformation & what of the most important part if you have to some questioners please include the original questioners and make a skill that they use, because its important and the second one is the statistic of respondent, its important to have a look the respondent is ready can give a inside & the participant can represent the village.

6. Submit article to BUSINTA Journal (17 Desember 2023)

The screenshot shows the author dashboard for the journal 'Bulletin of Social Informatics Theory and Application'. The page title is '674 / Ni Luh Ayu Kartika Yuniastari Sarja et al. / Digital village system transformation to increase the potential of Sidemen Village Karangasem Bali'. The dashboard includes a 'Submission Files' table with the following data:

File Name	Date	Type
2068-1 yuniastari, Paper BUSINTA Rev.docx	December 17, 2023	Article Text

There is a 'Download All Files' button at the bottom right of the table.

The screenshot shows an email from Aji Prasetya Wibawa, Ph.D. (aji.prasetya.ft@um.ac.id via ascee.org) to Ni Luh Ayu Kartika Yuniastari Sarja. The email content is as follows:

Thank you for submitting the manuscript, "Digital Village System Transformation to Increase the Potential of Sidemen Village Karangasem Bali" to Bulletin of Social Informatics Theory and Application. With the online journal management system that we are using, you will be able to track its progress through the editorial process by logging in to the journal web site:
