### Abstract:

This study explores the implementation of the green tourism (GT) in the tourist village in Bali using Penta Helix perspective. The data were collected through observation, interview and library research. The informants were determined using the sampling purposive method. The data were analysed using mixed method. The result shows that the GT has been well implemented in the tourist village, as shown by the following things: the tourist village has been developed by preserving the environment; the tourist village has been able to improve the vitality of the local economy; the tourist village has been able to maintain the cultural diversification; and the tourist village has been able to introduce new experience to tourists. The result shows that the environmental, the local economic, the culture and experience achievement contribute to the GT.

**Keywords:** green tourism; tourist village; Penta Helix; perspective.

**JEL Classification:** Q57; Z32.

### Introduction

The existence of the tourist village in Bali cannot be separated from the role played by the penta Penta Helix actors in their contribution to the rural development. The greater the role played by the Penta Helix actors in the rural development the more opportunities the tourist village will have to develop. Meyliani *et al.* (2018) and Putra (2019) state that the extent to which a rural program is successful cannot be separated from the role played by the Penta Helix actors, especially the local people, in supporting the development of the tourist village. It is realized that the Penta Helix actors' contribution strongly supports the tourist village's image as the basic capital for developing the tourist village into a sustainable destination. Such an image will directly determine the tourist village's sustainability.
